

Robots are the Future

By: Haylie Smith

We need doctors, scientists, vets, and more
So robots can do the other chores
Checkouts, cleaning, building too
Robots can do it all for you.

People will leave their present jobs
To find something improved
Grocers, teachers, barbers too
Can all be changed to something new.

Kids who are 4, 5, or 6 might have jobs that don't exist
There might be kids who are 9 or 10
Who are looking for careers to challenge them
There will be plenty of new jobs by then.

Some people think that robots are bad
But that's just simply not true
They help us do the small things
Which are more important to me and you.

Robots can't do everything
That's clearly a fact
But they can do a lot of things
And make a big impact.
